This manual is intended to meet the Manufacturer’s Instructions as required by ANSI Z359 and should be used as part of an employee training program as required by OSHA.
**WARNING:** This product is part of a personal restraint, work positioning, suspension, or rescue system. These instructions must be provided to the user and rescuer (see section 8.0 Terminology). The user must read and understand these instructions or have them explained to them before using this equipment. The user must read and follow the manufacturer’s instructions for each component or part of the complete system. Manufacturer’s instructions must be followed for proper use and maintenance of this product. Alterations or misuse of this product or failure to follow instructions may result in serious injury or death.

**IMPORTANT:** If you have questions on the use, care, or suitability of this equipment for your application, contact DBI-SALA.

**IMPORTANT:** Before using this equipment, record the product identification information from the ID label into the inspection and maintenance log in section 10.0 of this manual.

**DESCRIPTIONS**

**ExoFit Vest Style Full Body Harness:** See Figure 1.

**ExoFit Cross-Over Style Full Body Harness:** See Figure 2.

**OPTIONS:**

DBI-SALA ExoFit and ExoFit XP Full Body Harnesses are available with options and accessories. Following is a partial list of commonly used options and accessories (some options may not be available on all harnesses):

- Side D-rings
- Front D-rings
- Hip pad with side D-rings
- Tongue buckle body belt
- Lanyard attached directly to D-ring or attachment element
Figure 1 - ExoFit Vest Style Full Body Harness

- Shoulder Strap
- Chest Strap
- Parachute Buckle
- Quick Connect Buckle
- Leg Strap
- Dorsal D-ring
- Product Warning and Identification Labels
Figure 2 - ExoFit Cross-Over Style Full Body Harness

- Shoulder Strap
- Parachute Buckle
- Front Attachment Element (D-ring Or Web Loop)
- Quick Connect Buckle
- Leg Strap
- Dorsal D-ring
- Product Warning and Identification Labels
- Side D-rings
1.0 APPLICATIONS

1.1 PURPOSE: DBI-SALA ExoFit and ExoFit XP full body harnesses are to be used as components in personal fall arrest, restraint, work positioning, climbing, or rescue systems. See Figures 1 and 2 for harness styles.

Harnesses included in this manual are full body harnesses and meet ANSI Z359.1 and OSHA requirements. See Figure 3 for application illustrations.

WARNING: Working at height has inherent risks. Some risks are noted here but are not limited to the following: falling, suspension/prolonged suspension, striking objects, and unconsciousness. In the event of a fall arrest and/or subsequent rescue (emergency) situation, some personal medical conditions may affect your safety. Medical conditions identified as risky for this type of activity include but are not limited to the following: heart disease, high blood pressure, vertigo, epilepsy, drug or alcohol dependence, psychiatric illness, impaired limb function and balance issues. We recommend that your employer/physician determine if you are fit to handle normal and emergency use of this equipment.

A. PERSONAL FALL ARREST: The full body harness is used as a component of a personal fall arrest system. Personal fall arrest systems typically include a full body harness and a connecting subsystem (energy absorbing lanyard). Maximum arresting force must not exceed 1,800 lbs (8 kN). For fall protection applications connect the fall arrest subsystem (example: lanyard, SRL, energy absorber, etc.) to the D-ring or attachment element on your back, between your shoulder blades.

B. WORK POSITIONING: The full body harness is used as a component of a work positioning system to support the user at a work position. Work positioning systems typically include a full body harness, positioning lanyard, and a back-up personal fall arrest system. For work positioning applications, connect the work positioning subsystem (example: lanyard, Y-lanyard, etc.) to the lower (hip level) side or belt mounted work positioning attachment anchorage elements (D-rings). Never use these connection points for fall arrest.

C. LADDER CLIMBING: The full body harness is used as a component of a climbing system to prevent the user from falling when climbing a ladder or other climbing structure. Climbing systems typically include a full body harness,
vertical cable or rail attached to the structure, and climbing sleeve. For ladder climbing applications, harnesses equipped with a frontal D-ring in the sternal location may be used for fall arrest on fixed ladder climbing systems. These are defined in ANSI A14.3.

D. RESCUE: The full body harness is used as a component of a rescue system. Rescue systems are configured depending on the type of rescue. For limited access (confined space) applications, harnesses equipped with D-rings on the shoulders may be used for entry and egress into confined spaces where worker profile is an issue.

E. CONTROLLED DESCENT: For controlled descent applications, harnesses equipped with a single sternal level D-ring, one or two frontal mounted D-rings, or a pair of connectors originating below the waist (such as a seat sling) may be used for connection to a descender or evacuation system.

E. RESTRAINT: The full body harness is used as a component of a restraint system to prevent the user from reaching a fall hazard. Restraint systems typically include a full body harness and a lanyard or restraint line.

1.2 LIMITATIONS: Consider the following application limitations before using this equipment:
A. **CAPACITY:** These full body harnesses are designed for use by persons with a combined weight (clothing, tools, etc.) of no more than 420 lbs. (191 kg) Make sure all of the components in your system are rated to a capacity appropriate to your application.

B. **FREE FALL:** Personal fall arrest systems used with this equipment must be rigged to limit the free fall to 6 feet (ANSI Z359.1). Restraint systems must be rigged so that no vertical free fall is possible. Work positioning systems must be rigged so that free fall is limited to 2 feet (.6 m) or less. Personnel riding systems must be rigged so that no vertical free fall is possible. Climbing systems must be rigged so that free fall is limited to 18 inches (.5 m) or less. Rescue systems must be rigged so that no vertical free fall is possible. See subsystem manufacturer’s instructions for more information.

C. **FALL CLEARANCE:** See Figure 4. There must be sufficient clearance below the user to arrest a fall before the user strikes the ground or other obstruction. The clearance required is dependent on the following factors:

- Elevation of anchorage
- Deceleration distance
- Worker height
- Connecting subsystem length
- Free fall distance
- Movement of harness attachment element

See subsystem manufacturer’s instructions for more information.

---

**Figure 4 - Fall Clearance**

![Diagram of fall clearance](image)
D. **SWING FALLS:** See Figure 5. Swing falls occur when the anchorage point is not directly above the point where a fall occurs. The force of striking an object in a swing fall may cause serious injury or death. Minimize swing falls by working as close to the anchorage point as possible. Do not permit a swing fall if injury could occur. Swing falls will significantly increase the clearance required when a self retracting lifeline or other variable length connecting subsystem is used.

E. **EXTENDED SUSPENSION:** A full body harness is not intended for use in extended suspension applications. If the user is going to be suspended for an extended length of time it is recommended that some form of seat support be used. DBI-SALA recommends a seat board, suspension work seat, seat sling, or a boatswain chair. Contact DBI-SALA for more information on these items.

F. **ENVIRONMENTAL HAZARDS:** Use of this equipment in areas with environmental hazards may require additional precautions to prevent injury to the user or damage to the equipment. Hazards may include, but are not limited to; heat, chemicals, corrosive environments, high voltage power lines, gases, moving machinery, and sharp edges.

G. **TRAINING:** This equipment must be installed and used by persons trained in its correct application and use. See section 4.0.

**IMPORTANT:** When working with tools, materials, or in high temperature environments, ensure that associated fall protection equipment can withstand high temperatures, or provide protection for those items.

1.3 Refer to national Standards including ANSI Z359 (.0, .1, .2, .3, and .4) family of standards on fall protection, ANSI A10.32, and applicable local, state and federal (OSHA) requirements governing occupational safety for more information about work positioning systems.

**2.0 SYSTEM REQUIREMENTS**

2.1 **COMPATIBILITY OF COMPONENTS:** DBI-SALA equipment is designed for use with DBI-SALA approved components and subsystems only. Substitutions or replacements made with non-approved components or subsystems may jeopardize compatibility of equipment and may effect the safety and reliability of the complete system.
2.2 **COMPATIBILITY OF CONNECTORS:** Connectors are considered to be compatible with connecting elements when they have been designed to work together in such a way that their sizes and shapes do not cause their gate mechanisms to inadvertently open regardless of how they become oriented. Contact DBI-SALA if you have any questions about compatibility.

Connectors (hooks, carabiners, and D-rings) must be capable of supporting at least 5,000 lbs. (22.2kN). Connectors must be compatible with the anchorage or other system components. Do not use equipment that is not compatible. Non-compatible connectors may unintentionally disengage. See Figure 6. Connectors must be compatible in size, shape, and strength. Self locking snap hooks and carabiners are required by ANSI Z359.1 and OSHA.

2.3 **MAKING CONNECTIONS:** Only self-locking snap hooks and/or carabiners shall be used with this equipment. Ensure all connectors are fully closed and locked and compatible.

DBI-SALA connectors (snap hooks and carabiners) are designed to be used only as specified in each product’s user instructions. See Figure 3 for inappropriate connections. DBI-SALA snap hooks and carabiners should not be connected:

A. To a D-ring which another connector is already attached.

B. In a manner that would result in a load on the gate.

---

**Figure 6 - Unintentional Disengagement (Roll-out)**

If the connecting element that a snap hook (shown) or carabiner attaches to is undersized or irregular in shape, a situation could occur where the connecting element applies a force to the gate of the snap hook or carabiner. This force may cause the gate (of either a self-locking or a non-locking snap hook) to open, allowing the snap hook or carabiner to disengage from the connecting point. For ANSI Z359.1-2007 compliant hooks, there are no restrictions on the size or shape of the mating connector provided the snap hook is free to align with the applied load as intended.

1. Force is applied to the snap hook.
2. The gate presses against the connecting ring.
3. The gate opens allowing the snap hook to slip off.
NOTE: Large throat snap hooks should not be connected to standard size D-rings or similar objects which will result in a load on the gate if the hook or D-ring twists or rotates, unless the snap hook complies with ANSI Z359.1-2007 and is equipped with a 3,600 lb gate. Check the marking on your snap hook to verify that it is appropriate for your application.

C. In a false engagement, where features that protrude from the snap hook or carabiner catch on the D-ring, and without visual confirmation seems to be fully engaged to the anchor point.

D. To each other.

E. Directly to webbing or rope lanyard for tie-back (unless specifically provided by the manufacturer).

F. To any object which is shaped or dimensioned such that the snap hook or carabiner will not close and lock, or where roll-out could occur.

OTHER RESTRICTIONS:

- Do not make connections where the hook locking mechanism can come into contact with a structural member or other equipment and potentially release the hook.

- Do not connect a snap hook into a loop or thimble of a wire rope or attach in any way to a slack wire rope.

- The snap hook must be free to align with the applied load as intended (regardless of the size or shape of the mating connector).

- A carabiner may be used to connect to a single or pair of soft loops on a body support such as a body belt or full body harness, provided the carabiner can fully close and lock. This type of connection is not allowed for snap hooks.
• A carabiner may be connected to a loop or ring connector that is already occupied by a choker style connector. This type of connection is not allowed for snap hooks.

2.4 CONNECTING SUBSYSTEMS: Connecting subsystems (self-retracting lifeline, lanyard, rope grab and lifeline, cable sleeve) must be suitable for your application. See section 1.1. See subsystem manufacturer’s instructions for more information. Some harness models have web loop connection points. Do not use snap hooks to connect to web loops. Use a self-locking carabiner to connect to a web loop. Ensure the carabiner cannot cross-gate load (load against the gate rather than along the backbone of the carabiner).

Some lanyards are designed to choke onto a web loop to provide a compatible connection. See Figure 8. Lanyards may be sewn directly to the web loop forming a permanent connection. Do not make multiple connections onto one web loop, unless choking two lanyards onto a properly sized web loop.

2.5 ANCHORAGE STRENGTH: The anchorage strength required is dependent on the application type. The following are the requirements of ANSI 359.1 for these application types:

A. FALL ARREST: Anchorages selected for fall arrest systems shall have a strength capable of sustaining static loads applied in the directions permitted by the system of at least:

1. 5,000 lbs. (22.2 kN) for non-certified anchorages, or
2. Two times the maximum arresting force for certified anchorages. When more than one fall arrest system is attached to an anchorage, the strengths set forth in (1) and (2) above shall be multiplied by the number of systems attached to the anchorage.

B. RESTRAINT: Anchorages selected for restraint and travel restraint systems shall have a strength capable of sustaining static loads applied in the directions permitted by the system of at least:

1. 1,000 lbs. (4.5 kN) for non-certified anchorages, or
2. Two times the foreseeable force for certified anchorages. When more than one restraint and travel restraint system is attached to an anchorage, the strengths set forth in (1) and (2) above shall be multiplied by the number of systems attached to the anchorage.
C. WORKING POSITIONING: Anchorages selected for work positioning systems shall have a strength capable of sustaining static loads applied in the directions permitted by the system of at least:
1. 3,000 lbs. (13.3 kN) for non-certified anchorages, or
2. Two times the foreseeable force for certified anchorages. When more than one work positioning system is attached to an anchorage, the strengths set forth in (1) and (2) above shall be multiplied by the number of systems attached to the anchorage.

D. RESCUE: Anchorages selected for rescue systems shall have a strength capable of sustaining static loads applied in the directions permitted by the system of at least:
1. 3,000 lbs. (13.3 kN) for non-certified anchorages, or
2. Five times the foreseeable force for certified anchorages. When more than one rescue system is attached to an anchorage, the strengths set forth in (1) and (2) above shall be multiplied by the number of systems attached to the anchorage.

E. CLIMBING: The structure to which a climbing system is attached must sustain the loads required by that particular system. See instructions for climbing system for requirements.

3.0 DONNING AND USE

WARNING: Do not alter or intentionally misuse this equipment. Consult DBI-SALA when using this equipment in combination with components or subsystems other than those described in this manual. Some subsystem and component combinations may interfere with the operation of this equipment. Use caution when using this equipment around moving machinery, electrical and chemical hazards, and sharp edges.

Figure 9 - Front and Back View of ExoFit Vest Style Full Body Harness

Belt Loops
3.1 **BEFORE EACH USE** of this equipment inspect it according to section 5.0 of this manual.

3.2 **PLAN** your system before use. Consider all factors that will affect your safety during use of this equipment. The following list gives important points to consider when planning your system:

A. **ANCHORAGE:** Select an anchorage that meets the requirements specified in sections 1.2 and 2.5.

B. **SHARP EDGES:** Avoid working where system components may be in contact with, come in contact with, or abrade against, unprotected sharp edges.

C. **AFTER A FALL:** Any equipment which has been subjected to the forces of arresting a fall or exhibits damage consistent with the effect of fall arrest forces as described in section 5.0, must be removed from service immediately and destroyed by the user, the rescuer, or an authorized person.

D. **RESCUE:** The employer must have a rescue plan when using this equipment. The employer must have the ability to perform a rescue quickly and safely.

3.3 **DONNING AND FITTING THE HARNESS:**

A. **ExoFit Vest Style Full Body Harness:** See Figure 9 for front and back views of the ExoFit Vest style full body harness. Your harness incorporates loops for a removable waist belt. The belt can be installed through the two loops in the harness located in the lower back shoulder straps. The belt will pass through the harness just below the padded area. The hip pad, if used, is secured to the belt by passing the belt through the hip pad loops.

Don the ExoFit Vest style full body harness by following these steps (see Figures 10 and 11):

Step 1. Locate back D-ring held in position by the D-ring pad; lift up harness and hold by this D-ring. Ensure the straps are not twisted.

Step 2. Grasp the shoulder straps and slip the harness onto one arm. The D-ring will be located on your back side. Ensure that the straps are not tangled and hang freely. Slip your free arm into the harness and position the shoulder straps on top of your shoulder. Ensure that the straps are not tangled and hang freely. The chest strap, with quick connect buckle, will be positioned on the front side when worn properly.

Step 3. Reach between your legs and grasp the gray leg strap on your left side. Bring the strap up between your legs and connect it by inserting the tab of the buckle into
Figure 10 - Donning ExoFit Vest Style Full Body Harness

Step 1

Step 2

Step 3

Step 4

Step 5
receptor of quick connect buckle on the left side as shown in Figure 10. You will hear a click when the tab engages properly. Connect the right leg strap using the same procedure. Pull the free end of the strap away from the buckle to make a snug fit on each leg strap. To loosen the leg strap, grasp the yellow plastic portion of the buckle and pull away from your leg to allow the strap to pull through the buckle. A plastic end keeper on the end of the strap will stop it from pulling completely out of the buckle. To release the buckle, press the silver-colored tabs on the buckle towards each other with one hand, while pulling on the tab portion of the buckle with the other hand.

**Step 4.** Attach the chest strap by inserting the tab of the buckle into the receptor of the quick connect buckle. You will hear a click when the tab engages properly. The chest strap should be 6 in. (15 cm) down from the top of your shoulders. Pass excess strap through the loop keepers. The strap may be tightened to a snug fit by pulling the free strap end to the left (away from the buckle). To loosen the chest strap, grasp the yellow plastic portion of the buckle and pull away from the body to allow the strap to pull through the buckle. A plastic end keeper on the end of the strap will stop it from pulling completely out of the buckle. To release the buckle, press the silver-colored tabs on the buckle toward each other with one hand, while pulling on the tab portion of the buckle with the other hand.
Figure 13 - Donning ExoFit Cross-Over Style Full Body Harness

Step 1
Step 2
Step 3
Step 4
Step 5
Step 5. Adjust shoulder straps to a snug fit by pulling excess strap through the parachute buckles on each side of the harness. Left and right sides of shoulder straps should be adjusted to the same length and the chest strap should be centered on your lower chest, 6 in. (15 cm) down from shoulder. The front D-ring on the vest style harness is moved up or down by adjusting the shoulder straps and leg straps. Center the back D-ring between your shoulder blades. Note: On ExoFit XP models, the back (dorsal) D-ring can be repositioned up or down as needed for a correct fit. Adjust leg straps to a snug fit. At least 3 in. (8 cm) of webbing must extend past the buckle on the leg straps. Adjust the waist belt (if present).

B. **EXOFIT CROSS-OVER STYLE FULL BODY HARNESS:**
Your harness incorporates loops for a removable waist belt. The belt can be installed through the two loops in the harness located in the lower back shoulder straps, see Figure 12. The belt will pass through the harness just below the padded area. The hip pad, if used, is secured to the belt by passing the belt through the hip pad loops. Don the ExoFit Cross-Over style full body harness by following these steps (see Figures 13 and 14):

Step 1. Locate the back D-ring held in position by the D-ring pad; lift up the harness and hold by this D-ring. Ensure the straps are not twisted.

Step 2. Grasp the shoulder straps between the back and front D-ring and slip the harness over your head from the left side. Position the shoulder straps on top of your shoulders. Ensure that the straps are not tangled and hang freely. The D-ring will be positioned on your back when worn properly.

Step 3. Grasp the tab of the buckle located at your right hip and insert it into the receptor of the quick connect buckle, see Figure 13. You will hear a click when the tab engages properly.

---

**Figure 14 - ExoFit Quick Connect Buckle Connections**

<table>
<thead>
<tr>
<th>Hip Strap: Attach chest strap by inserting the tab of the buckle into the receptor of the quick connect buckle until a click is heard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leg Straps: Attach leg strap by inserting the tab of the buckle into the receptor of the quick connect buckle until a click is heard</td>
</tr>
</tbody>
</table>
Step 4. Reach between your legs and grasp the gray leg strap on your left side. Bring the strap up between your legs and insert the tab of the buckle into the receptor of the buckle on the left side as shown in Figure 13. You will hear a click when the tab engages properly. Connect the right leg strap using the same procedure. Pull the free end of the strap away from the buckle to make a snug fit on each leg strap. To loosen the leg strap, grasp the yellow plastic portion of the buckle and pull away from your leg to allow the strap to pull through the buckle. A plastic end keeper on the end of the strap will stop it from pulling completely out of the buckle. To release the buckle, press the silver-colored tabs on the buckle towards each other with one hand, while pulling on the tab portion of the buckle with the other hand.

Step 5. Adjust shoulder strap to a snug fit by pulling excess strap through the parachute buckle. Left and right sides of the shoulder straps should be adjusted to the same length and the front D-ring should be centered on your lower chest. The back D-ring should be centered between your shoulder blades. Note: On ExoFit XP models, the back (dorsal) D-ring can be repositioned up or down as needed for a correct fit. Adjust the leg straps to a snug fit. At least 3 in. (8 cm) of webbing must extend past the buckle on the leg straps. Adjust the waist belt (if present).

3.4 USE OF FALL ARREST D-RING OR ATTACHMENT ELEMENT: For fall protection applications connect to the D-ring or attachment element on your back, between your shoulder blades. Side D-rings, if present, are for positioning or restraint applications only. Front D-ring, if present, is for ladder climbing or positioning. For rescue, back or front D-rings may be used. D-rings on seat sling are for work positioning or personnel riding.

3.5 MAKING CONNECTIONS: When using a hook to connect to an anchorage or when coupling components of the system together, ensure roll-out cannot occur. Roll-out occurs when interference between the hook and mating connector causes the hook gate to unintentionally open and release. Self-locking snap hooks and carabiners should be used to reduce the possibility of roll-out. Do not use hooks or connectors that will not completely close over the attachment object. See subsystem manufacturer’s instructions for more information on making connections.

3.6 CONNECTING SYSTEM COMPONENTS: After properly fitting the full body harness, the user may then connect to other system components. Follow the guidelines in section 3.4 on selecting the correct attachment element.

4.0 TRAINING

4.1 It is the responsibility of the purchaser and the user of this equipment to assure that they understand these instructions and
are trained in the correct care and use of this equipment. They must also be aware of the operating characteristics, application limits, and the consequences of improper use of this equipment.

**IMPORTANT:** Training must be conducted without exposing the user to a fall hazard. Training should be repeated on a periodic basis.

## 5.0 INSPECTION

### 5.1 The i-Safe™ RFID tag on this harness can be used in conjunction with the i-Safe handheld reading device and the web based portal to simplify inspection and inventory control and provide records for your fall protection equipment. See Figure 15.

### 5.2 FREQUENCY: Before each use inspect the full body harness according to sections 5.3 and 5.4. The harness must be inspected by a competent person, other than the user, at least annually. Record the results of each formal inspection in the inspection and maintenance log in section 10.0, or use the i-Safe™ inspection web portal to maintain your inspection records. If you are a first-time user, contact a Customer Service representative in the US at 800-328-6146 or in Canada at 800-387-7484 or if you have already registered, go to: www.capitalsafety.com/isafe.html. Follow
instructions provided with your i-Safe handheld reader or on the web portal to transfer your data to your web log.

**IMPORTANT:** If the full body harness has been subjected to fall arrest or impact forces it must be immediately removed from service and destroyed.

**IMPORTANT:** Extreme working conditions (harsh environments, prolonged use, etc.) may require increasing the frequency of inspections.

### 5.3 Inspection Steps:

**Step 1.** Inspect harness hardware (buckles, D-rings, back pad, loop keepers); these items must not be damaged, broken, distorted, and must be free of sharp edges, burrs, cracks, worn parts, or corrosion. PVC coated hardware must be free of cuts, rips, tears, holes, etc. in the coating to ensure non-conductivity. Ensure that the release tabs of the buckle work freely and that a click is heard when the buckle engages. Inspect parachute buckle spring.

**Step 2.** Inspect webbing; material must be free of frayed, cut, or broken fibers. Check for tears, abrasions, mold, burns, or discoloration. Inspect stitching; check for pulled or cut stitches. Broken stitches may be an indication that the harness has been impact loaded and must be removed from service. When performing the annual formal inspection on the XP models of the ExoFit harness, remove the back pad and leg strap pads to facilitate inspection of the webbing.

**Step 3.** Inspect the labels: All labels should be present and fully legible. See section 9.0.

**Step 4.** Inspect each system component or subsystem according to manufacturer’s instructions.

**Step 5.** Record the inspection date and results in the inspection and maintenance log in section 10.0.

**Step 6.** On the XP models of the ExoFit, inspect the impact indicator. See Figure 16. If the dorsal D-ring of the harness has experienced an impact, a red-colored area at the base of the D-ring will become visible and indicate that an impact has occurred. The impact indicator cannot be reset and the harness must be removed from service and destroyed.

### 5.4 If inspection reveals a defective condition, remove the unit from service immediately and destroy it.

**NOTE:** Only DBI-SALA or parties authorized in writing may make repairs to this equipment.
6.0 MAINTENANCE, SERVICING, STORAGE

6.1 WASHING INSTRUCTIONS:

A. FULL BODY HARNESS:

Step 1. Spot clean the ExoFit full body harness with water and a mild soap solution. The harness may be laundered by using a bleach-free detergent. Water temperature for wash and rinse must not exceed 160° F (70° C).

Step 2. To launder the ExoFit XP, remove the pads. See Figure 17. To remove the pads, undo the snaps and zippers. The pads will fall away from the harness straps.

Step 3. Place the harness in the supplied laundry bag. The bag is designed to prevent entanglement of harnesses and to protect the washing machine from damage. Use of the laundry bag to wash the pads is optional. Note: Use a bleach-free detergent when washing both the harness and the pads.

</tbody>
</table>

Figure 17 - Removing ExoFit XP Pads

To remove the pads, undo the snaps and zippers. The pads will fall away from the harness straps.

Only one leg pad is shown for clarity.
Step 4. Harness and pads may be air dried or tumble dried on low heat (not greater than 200° F (90° C).

Step 5. Replace the pads before using the harness. See Figure 18. To replace the ExoFit XP Pads, lay out the harness as shown and place the pads under the straps. Then wrap the zippered flaps over the straps and close the snaps and zippers. Note: The lower snap closure on the leg strap pad must connect between the layers of the seat strap.

Step 6. The retrieval harness pads have openings for the shoulder D-rings. See Figure 19. When replacing the pads, make sure the D-rings are located on the shoulder straps so that they protrude through the openings and are available for connecting retrieval systems.

**B. ARC FLASH FULL BODY HARNESS:**

Step 1. Spot clean the ExoFit full body harness. Lay the webbing on a flat surface and clean each side using a mild bleach-free detergent with a sponge or light brush, so as not to damage or bulk up the filaments. Rinse thoroughly.

**IMPORTANT:** ASTM F887-2004 rated harnesses should use a mild bleach-free detergent rather than soap; as soap may leave a residue which could affect flame resistance.

Step 2. To thoroughly clean the ExoFit XP, remove the pads. See Figure 17. Undo the snaps and zippers. The pads will fall away from the harness straps.

Step 3. Harness and pads should be thoroughly air dried before using. Do not dry in a mechanical dryer.

**IMPORTANT:** A wet harness will have reduced strength.

Step 4. See step 5 above.

Step 5. See step 6 above.
IMPORTANT: An excessive buildup of dirt, paint, etc. may prevent the full body harness from working properly, and in severe cases degrade the webbing to a point where it weakens and should be removed from service.

- Use extra rinse cycle to be sure all residual wash chemicals are removed.
- Air dry or tumble dry using permanent press cycle and low heat. Drying temp should not exceed 200°F (93°C). These fabrics dry quickly, for lowest shrinkage, do not over dry.

More information on cleaning is available from Capital Safety. If you have questions concerning the condition of your harness, or have any doubt about putting it into service contact Capital Safety.

6.2 Additional maintenance and servicing procedures must be completed by a factory authorized service center. Authorization must be in writing. Do not attempt to disassemble the unit.

6.3 Store the full body harnesses in a cool, dry, clean environment out of direct sunlight. Avoid areas where chemical vapors may exist. Thoroughly inspect the full body harness after extended storage.

7.0 SPECIFICATIONS

7.1 PERFORMANCE

- **Maximum Free Fall Distance:** No greater than 6 ft (1.8 m), per federal law and ANSI Z359.1.
- **Maximum Arresting Force:** 1,800 lbs. (13 kN)
- **Maximum Capacity:** 420 lbs. (191 kg)
- **Approximate Weight:**
  - Harness only: 3 lbs. (1.4 kg)
  - Harness with Side D-rings: Add 1/2 lb. (.23 kg)
  - Harness with Front D-ring: Add 1/4 lb. (.11 kg)
  - Harness with Back Pad or Belt: Add 1 lb. (.45 kg)
7.1 MATERIALS
STANDARDS: All harnesses marked with ASTM F887-2004 meet all testing requirements of the standard.

Webbing Materials: 7000 Lbs. (31 kN) Tensile strength Nylon
7000 Lbs. Tensile strength Nomex* covered Kevlar*

Pad and Label Cover Materials:
• All outer fabric is Nomex and Kevlar blend fabric
• Fire resistant hook and loop fasteners

Optional Accessories:
• Hip Pad with side D-rings
• Nomex covered Kevlar webbing
• Non-sparking/ Non-conductive PVC coated hardware
• Arc-rated hip, leg, and back pads
• Polyurethane coated, arc-rated dorsal web loop

* Nomex and Kevlar belong to DuPont

8.0 TERMINOLOGY

AUTHORIZED PERSON: A person assigned by the employer to perform duties at a location where the person will be exposed to a fall hazard (otherwise referred to as “user” for the purpose of these instructions).

RESCUER: Person or persons other than the rescue subject acting to perform an assisted rescue by operation of a rescue system.

CERTIFIED ANCHORAGE: An anchorage for fall arrest, positioning, restraint, or rescue systems that a qualified person certifies to be capable of supporting the potential fall forces that could be encountered during a fall or that meet the criteria for a certified anchorage prescribed in this standard.

QUALIFIED PERSON: A person with a recognized degree or professional certificate and with extensive knowledge, training, and experience in the fall protection and rescue field who is capable of designing, analyzing, evaluating and specifying fall protection and rescue systems to the extent required by this standard.

COMPETENT PERSON: One who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.
9.0 LABELING

9.1 Labels are enclosed in an attached fabric wrap located on the back right shoulder strap as the harness is being worn. If a waist belt is to be worn with the harness, be careful not to enclose the belt loop when closing the wrap.

These labels must be securely attached to the harness and fully legible:

WARRANTY
Equipment offered by DBI-SALA are warranted against factory defects in workmanship and materials for a period of two years from date of installation or use by the owner, provided that this period shall not exceed two years from the date of shipment. Upon notice in writing, DBI-SALA will promptly repair or replace all defective items. DBI-SALA reserves the right to elect to have any defective item returned to its plant for inspection before making a repair or replacement. This warranty does not cover equipment damages resulting from abuse, damage in transit, or other damage beyond the control of DBI-SALA. This warranty applies only to the original purchaser and is the only one applicable to our products, and is in lieu of all other warranties, expressed or implied.
